

Tim Brunke — Selected Project Summaries

Project 1

Project Title: Supply Chain Turnaround for PE-Backed Wireless Retailer (Post-Bankruptcy NewCo)

Problem: A PE-owned wireless retailer emerging from bankruptcy needed a rebuilt supply chain that could support national retail without the cost and service failures of the prior model. Complexity across Asian vendors, inventory, and store fulfillment threatened in-stock levels and working capital.

Actions: Led a ~150-person supply chain organization managing ~\$30M cost and \$500M+ procurement. Analyzed end-to-end SC performance, outsourced select SC functions, redesigned store UoM / WMS-JDE pack-ship logic for multi-level MoQ, and renegotiated terms with ~74 Asian vendors.

Results: Reduced annual SC costs ~\$5M; improved key SC metrics (forecast accuracy, in-stock %, inventory turns, delivery) ~57%; cut order fulfillment time ~33%; designed for 95%+ in-stock at store level.

Project 2

Project Title: First Fully Outsourced Carrier Logistics (4PL) for Regional Prepaid Wireless Carrier

Problem: A regional prepaid wireless carrier's logistics and supply chain could not scale economically; warehouse-to-store accuracy and forecast quality limited growth and capital efficiency.

Actions: Designed and led the carrier's first fully outsourced logistics / 4PL program. Cleaned store-level SKU and MoQ master data for 3PL handoff. Installed carrier S&OP rhythm (product, 4P, consensus demand) and an employee idea-driven cost program with board visibility.

Results: Delivered ~\$100M capital-spending benefit from the outsourced logistics model; improved warehouse-to-store order accuracy to >99%; raised forecast accuracy to >75%.

Project 3

Project Title: Global NetSuite, HubSpot, and Kyriba Implementation for PE Exit Readiness (Multi-Entity Adtech)

Problem: A PE-backed multi-entity digital advertising platform lacked a single system of record for finance and go-to-market data, slowing PE exit readiness and creating heavy bank reconciliation and forecast blind spots across US and LATAM entities.

Actions: Served as ERP Program Leader; implemented NetSuite ERP and HubSpot CRM as global systems of record with NetSuite, LatamReady, and Deloitte Tax partners. Preceded ERP with a ~90-

day Run-the-Business / CPFR process install. Integrated banking partners through Kyriba (Citi live; LATAM banks in rollout). Built a real-time forecast and KPI dashboard for the ~\$40M business.

Results: Established NetSuite and HubSpot as the system of record for PE exit readiness; cut banking reconciliation effort ~50% via Kyriba; gave leadership real-time forecast and KPI visibility across the ~\$40M portfolio.

Project 4

Project Title: North America Operations and Retail Supply Chain for Global PC OEM

Problem: A global PC OEM's North America online and retail business (~\$10B) needed tighter operations, pricing and forecasting, and retail supply chain performance while reducing SC overhead and capturing wireless carrier revenue.

Actions: Led a ~100-person team across pricing, forecasting, demand planning, PLM, and retail ops for the ~\$10B NA online and retail operation. Drove wireless carrier contract pursuits in the US and Europe and profit actions in the ~\$2B consumer retail segment.

Results: Closed ~\$200M wireless carrier contract revenue (US and Europe); increased profits ~5% in the ~\$2B consumer retail market while cutting SC staff cost ~\$3M annually.

Project 5

Project Title: Six Sigma and Sales Governance / S&OP for Global Handset OEM

Problem: A global handset OEM's multi-regional sales organization (~\$18B sales / ~\$1B profit) needed stronger forecast governance and lower cost-to-serve across international sales and marketing.

Actions: Led Six Sigma as Master Black Belt across international sales and marketing. Built governance and S&OP so multi-regional sales could hit forecasts. Ran a value-of-efforts program to eliminate low-value work from the Europe and US sales workforce.

Results: Delivered ~\$20M annual cost reductions via Six Sigma; installed governance supporting forecast attainment for the ~\$18B sales / ~\$1B profit organization; reduced Europe and US sales workforce ~27% via value-of-efforts.

Project 6

Project Title: US & Canada Sales and Product Operations Build for SoftBank-Owned Wireless Distributor

Problem: A SoftBank-owned global wireless distributor needed a stronger US and Canada sales and product operations backbone spanning order management, call center, retail ops, and dealer support amid multibillion-dollar scale and post-acquisition commercial pressure.

Actions: Built and managed sales ops for the US&C business across OM, call center, retail ops, and dealer support. Stood up a customer-facing sales ops function and a Character Quest leadership program.

Results: Improved customer satisfaction ~40% via the customer-facing sales ops function; reached ~85% employee satisfaction through Character Quest.

Project 7

Project Title: Supply Chain Center of Excellence and Analytics Value for National Big-Box Retailer

Problem: A national big-box home-improvement retailer needed an enterprise supply chain analytics capability spanning demand, inventory, transportation, S&OP, and KPIs — plus measurable value across marketing, credit, and supply chain.

Actions: As Supply Chain Practice Leader at a decision-science firm, built a Supply Chain Center of Excellence covering demand analytics, inventory, transportation, S&OP, and KPI dashboards for the retailer engagement.

Results: Added ~\$10M enterprise value across marketing, credit, and supply chain.

Project 8

Project Title: Excess Inventory Disposition for PE-Backed Automotive Aftermarket Manufacturer

Problem: A PE-backed automotive aftermarket manufacturer carried ~\$2.4M excess raw material and WIP that needed disciplined disposition without destroying value or channel pricing.

Actions: Led categorization of excess RM/WIP, channel strategy across OEM and auction paths, and pricing governance for disposition.

Results: Structured and executed disposition of ~\$2.4M excess inventory under PE governance.

SHIP SET (2026-09-05): Projects 1–8 only. Project 9 (Voltron) removed per Tim. Slot 10 still open.
